DETAILED ACTION

1. Applicant's amendment and accompanying remarks filed March 31, 2006 have been acknowledged.

- 2. Examiner acknowledges amended claim 20.
- 3. Examiner acknowledges newly added claims 27-28.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1-3 and 9-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Guyette, U.S. Patent Number 5,425,986.

Guyette discloses a high-pressure laminate structure that can be suitable for flooring (see column 1, lines 44-62). The Guyette reference discloses a laminate structure comprising a fiber cementboard as a core layer or substrate (11) having a top and bottom surface and at least one resin impregnated sheet (30) on at least one side of the substrate (see Figure 1). Additionally, the reference discloses an adhesive (20), which can be an isocyanate/urethane, epoxy or polyvinyl acetate that is between the substrate and the at least one resin impregnated sheet (see Figure 2 and column 6, lines 15-35). Column 4, lines 49-68 of the reference disclose that the resin used to impregnate the sheets include melamine-formaldehyde resin and phenol-formaldehyde resin as per the instant claims. Also, Figure 1 of the reference discloses that a resin-impregnated paper

Application/Control Number: 10/770,739 Page 3

Art Unit: 1774

(30 and 31) can be laminated to both sides of the substrate. Additionally in Figure 1, another resin impregnated (41) sheet can be laminated onto another resin-impregnated sheet (30) as per instant claim 12.

- 6. Claim 8 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art does not provide for the recited building material, further including the elastomer having a glass transition temperature between about -90 and 50 °C.
- 7. Claims 20-28 are allowed. The prior art does not provide for the recited building material, further including the elastomeric film having a thickness of abour 5 mil or less and has an elongation between 20% and 1200%, wherein the modulus of elasticity at 100% elongation of between about 10 and 10, 000 psi, and wherein the elastomer ha a glass transition temperature between about -90 and 50 °C.

Response to Arguments

8. Applicant's arguments filed March 31, 2006 have been fully considered but they are not persuasive. Applicant's declaration is acknowledged. Applicant argues that the Guyette reference does not expressly disclose a building material having a stress-relieving elastomer or elastoermic film. Also, applicant argues that the reference does not discuss a layer having elastomeric properties. Guyette discloses adhesive(s) (20, 21) between the substrate and the at least one resin impregnated sheet. Applicant's instant claim 13 recites that the elastomer is an adhesive. Guyette discloses that the adhesive can be an epoxy or isocyanate/urethane.

Page 4

Art Unit: 1774

Applicant recites that the elastomer can be an epoxy or isocyanate/urethane (polyurethane). Isocyanate/urethane has a high elastic modulus and would provide sufficient stress relief. Also, applicant argues that the Guyette reference does not specify that the adhesive is elastomeric. The reference does disclose the use of adhesive based on isocycante/urethane and epoxy as the adhesives. Guyette describes a broad range of epoxy and would thus include epoxies that have elastomeric properties. Also, Guyette discloses the use of polyvinyl acetate as an adhesive. Polyvinyl acetate is known to be resistant to weathering, as is the elastomer claimed by applicant. Applicant also argues that the reference contemplates the adhesives to be used as rigid adhesives and that the adhesives are intended to be subjected to heat and pressure. Guyette discloses that the entire assembly is subjected to heat and pressure until the entire assembly is consolidated into a unitary laminate structure. Guyette does not disclose that the adhesive itself is a rigid adhesive. Guyette discloses a broad range of adhesives (epoxy), which can include epoxies that are elastomeric. Applicant also argues that the Guyette reference does not inherently disclose the claimed invention. Instant claim 1 is a broad claim that has the same components as provided by the Guyette reference. Instant claims 1 and 2 provide for a broad range of epoxies, which would include reactive epoxies. Instant claims 1 and 2 do not provide any distinguishing properties of the elastomer. Guyette and the instant application have the same components. The purpose of the epoxy as recited in instant claim1 does not provide any patentable weight to the claim. Applicant claims that the elastomer is used as a stress relieving between the cementitious substrate and at least one resin impregnated paper. Applicant is not claiming that the elastomer is acting as a stress reliever for the entire building material only between the cementitious substrate and the resin impregnated paper. Therefore, applicant's

argument regarding the adhesives of Guyette is inconsistent with what applicant is claiming. The rejection is maintained.

9. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communication from the examiner should be directed to Camie S. Thompson whose telephone number is (571) 272-1530. The examiner can normally be reached on Monday through Friday from 7:30 am to 4:00 pm. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rena L Dye, can be reached at (571) 272-3186. The fax phone number for the Group is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
